T/S RESOURCES

news/rumors
hardware software literature

April 1986 by Andy Kosiorek

Technical References:

Times Designs Magazine has republished the Timex 2068 Technical Manual in a spiral bound format for \$25.00. They have corrected all known errors of the original publication and are including schematics. Order from Time Designs Mag. Co. 29722 Hult Road, Colton, OR. 97017.

SAMS has published a "Computerfacts" on the Sinclair/Timex models ZX81/TS-1000. It is SAMS #CC14, dated 3-86. It contains 13 pages plus a 5 page appendix. Along with the usual schematics are block diagrams, grid traces, line definitions, IC pinouts, logic charts terminal guides, photos, parts lists, and trouble shooting guides.

Copies should be available at major electronic parts stores.

The Cuyahoga County Library System has a set that may be borrowed.

Cincinnati Computer Fest:
May 3 & 4th
Ramada Inn,
I-275, Sharonville Exit
Cincinnati, Ohio

To date 15 vendors, six publishers, and 4 Users Groups have signed to exhibit at the Fest. At least 500 attendees are expected for the two day event. See the Feb. issue of the Ramtop for complete details. The Cleveland Users Group will have a display.

TIMEX 6820 COMPUTER:

The Mar-Apr issue of Syncware News reports that TIMEX-USA will return to the computer market with a 68020 based PC. The 6820 will have a propriety operating system-TUNIX-(Timex Unix). It is to be CPM-80, MSDOS, PCDOS and CPM 68K compatible. It also will have special software to run Spectrum, 2068 & ZX81 programs. Some type of official announcements from Timex are expected in April. More next month if this is not an April Fools joke?????

CLUB NEWS

APRIL 1986

NEW WESTSIDE MEETING LOCATION:

Effective with the April 18th meeting the West Side section meetings will be held at the Lakewood Public Library, 15425 Detroit Avenue, Lakewood.

The Library building occupies a half block along Detroit Ave. at the southeast corner of Arthur Avenue.

Parking is available along Detroit, at the rear of the Library building, and across the street, behind the Discount Drug Mart and Elias Big Boy Restaurant.

Meeting time will be from 7 PM to 9:15 PM. The building must be vacated by 9:30.

The business meeting will start promptly at 7:30.

We will be using the basement Auditorium. Entrance is from a stairwell at the Detroit Avenue entrance. A elevator is available. --NO Smoking--

Long extension cords and plug strips will be required for any equipment demos.

see you there,
Andy Kosiorek, pres.

CHECK TAPE SPEED ON YOUR TS100C, 1500 or 2068
THE EASY WAY

* Taken from "Control things with your Timex Sinclair"
by Robert Swarts

Possibly the programs you've written and saved will load, but other tapes wont. This may indicate that your recorder or the recorder used to make the other tapes has tape speed or head azimuth problems. If no other tapes will load, its probably yours. If just one or two tapes wont load (especially if they're from the same other recorder) its probably the other machine. You can check your recorder's speed against the other recorder's, very easily.

Lines 10-30 comprise a simple Audio Generator (about 3 KHz). Lines 40-60 comprise a Frequency Counter, the frequency it measures will get displayed on the TV screen.

First, type in the program as you see it. Line 1 consists of a "REM" statement followed by 115 x's, which will be used to hold the machine language.

Second, Run 2; enter -

This loads the Rem statement with the machine code that is in A\$ (line 2). After the computer stops at line 7, then delete lines 2-7.

Third, Put a blank 5 minute tape in and prepare the recorder as if you're going to save a program. Type in Run 10; enter and start the recorder. Record several minutes, then press the "break" key to stop the program. Now, Run 40; enter and on the TV screen, with the recorder on "play", one should see the frequency of the audio on the tape that was just recorded. It should be well within 50 hz of what you recorded and should not vary more than that from sample to sample; otherwise, you've got intolerable speed fluctuations. Now play the tape back on the other recorder and observe the displayed frequency on the TV screen. If it differs more than 50 hz, then one or both of the recorders has a speed problem. If everything checks out so far, then one should consider a head azimuth alignment.

FIRST IN A SERIES

There are a number of reasons why you may want to make copies of your TS2068/Spectrum programs. You may have a program that doesn't load reliably, you may just want to have a spare copy in the event that your original program fails to load. Another use of copying programs is to allow you to shorten the loading time by elimination SCREENs. In any case, by following along with this series, not only will you learn how to make back up copies of your programs, but you'll also learn a lot about the inner workings of your computer.

"NORMAL" PROGRAMS

The most common scheme for loading programs is by loading a small BASIC loader program under whose control other program parts are loaded. Since these parts can be BASIC, code, or data arrays, I will refer to them as files. A typical program may load a SCREENs, a section of code, and maybe another BASIC program. If these files are preceded by a "tape header", they are considered to be "normal".

A tape header is the short (17 bytes) bit of information that precedes the main file. The header includes the name, type, and length of the file. If the file is a BASIC program, the header also includes the starting line number of the program if there is one. If the file is code, the header includes the address from which the code was saved. The information in the header isn't available to the computer user without some form of "header reader".

A header reader is an absolute must to start cracking into programs. Listing #1 is a simple header reader that works on the TS2068 in either the TS or Spectrum mode.

SAVING NORMAL PROGRAMS

1. Try loading the loader program and pressing BREAK. If this crashes the program, try merging the loader program. If it still crashes, try copying another program, and wait for next month's installment on stopping unstoppable programs.

2. Load the header reader program. Rewind the loader program and read the headers on the tape. Make sure that each file has a header. It may be very helpful to copy the information to the printer for later reference. Listen to the tape if you have doubts. Very high pitched sounds, or thin loading lines are clues that the program may be a fast loader. (Uncopyable by this method.)

3. Assuming that you've got this far, reload the loader program, and stop the program. Save the program using the command SAVE "filename" LINE x, where x is the starting line number as determined by the header reader program.

4. Load the next section of the program as determined by the header reader. If the next section of the program is a code file 30000 bytes long, loaded from address 35000, enter: LOAD "CODE". Then save the code with the command SAVE "filename" CODE 35000,30000. Continue saving the program portions until the entire program is saved.

5. Rewind your copy tape, and try loading it. If the program works, congratulations! If the program fails to work, try the procedures again. If it still doesn't work, read next month's column.

6. A final hint. Some programs load code into the system variables of memory. (23552 - 23732) Instead of loading the code into the system variables area of memory, load the code into higher memory, and save the bytes from high memory. Then modify the loader program to load the bytes into the correct address. This will prevent the program from crashing when the code is loaded while trying to make the copy.

NEXT MONTH: Stopping unstoppable and unmergable programs. listing the unlistable, and number misdirection. !!JACK!!

Howdy! Can you believe that almost 1/4 of 1986 is over already? I know that I can't! This year is just flying by for me. In less than ONE month the May T/S COMPUTER FEST will be here! I plan to be there. I sure hope you plan to be there too! I'm sure that it will be a fantastic event! You will see on this page a print out sent to me by Dave Hoshor that includes the companies and groups signed up as of 3/22/86. It was sent by Jack Robrtson from T/S Connection. As most of you know, we will have a table there. If you haven't sent your form yet, GET IT IN! (the form is in the FEB. RAMTOP)

On the inside of the last page, you will see a SURVEY. It was suggested by one of our out of state members, Joan Kealy. I think that it is a good idea. I hope that you will all cooperate and fill it out and send it to me. I need the information so as to update my files and give me a better idea just what equipment is out there. This does NOT mean that we plan to stop having articles for the 1000/1500! It DOES mean that we may start having articles dealing with such items as the QL, its software and hardware, Disk drives (the many out there!), and other new items that may be of interest to all of you. I know, for instance, that many of you now have modems that didn't 6 months or a year ago. It will also help in planning hardware projects. If you have ANY advice as to how to improve the RAMTOP, you are welcome to include a letter with the survey! PLEASE this time let's have a good return of these so I have a good representation of just what's out there and what your interests are now! THANK YOU!

In closing, I want to thank you ALL for your wonderful support of YOUR newsletter (and if I do say so myself, one of the best!) the RAMTOP! I am sorry to say that if my work load at my job increases to the point that has been projected this summer, we may have to get a new editor. It looks like I may be putting in over 20 hours OT a week this summer!

OK boys and girls, here is an updated list of Dealers/Vendors that will be exhibiting at the Fest. If you can't find your favorite dealer on this list, you just don't have a favorite. Aerco, Inc.; Budget Computers; Budget Robotics; Brice Rd. Computers; Cinti Users Group; Cleveland Users Group; Columbus Users Group; Computer Shopper; Computer Trader; Curry Computers; Damco Enterprises; Dayton Users Group; E. Arthur Brown; Frank Davis; G. Russell Electronics; JRC Software; Knighted Computers; Peech II Productions; RMG Enterprises; SUM; SyncWare; T/S Connection; TS Horizons; Time Designs; Variety Sales; WMJ Data Systems; Zebra, Inc. This will be the biggest gathering of T/S Dealers and Users that has come together since day one. Make your plans now to be in Cincinnati, May 3 and 4 for The Midwest Timeex/Sinclair Computer Fest.

Enter command, N for next message or <CR> for menu : n

There is another Computer Fest form on page 7.

Those of you that have the Interface one may find this of interest.

INTERFACE 1 / 2050 MODEM FIX

Until recently, there was a problem for those users of the 2050 modem and the Microdrive/Interface I. The devices used port addresses that were incompatible. Now a fix is available to rewire your modem to use an address that is agreeable to the Microdrive from Dave Clifford 13910 Halldale Ave., Gardena, Cal. 90249 The best part is the price: FREE!

The instructions are well written and illustrated. I completed the modification to my modem in about an hour. After modifying the modem, fourteen POKES are made to update the MTERM program to use the new port addresses.

In talking with Dave, he said that he is working on acquiring the rights to an English terminal program that allows the use of 64 columns and XMODEM transfer protocol.

David Hoshor
